ISSUE 22 - JANUARY 2022

Hi Everyone,

Here at Coquet Vets, we've had a good start to the new year. This month has been busy with new clients registering, and lots of new puppies and kittens, which we always love to see!

Our puppy parties are already up and running and we are pleased to see that they have been fully booked! For 2022, we have a lot of promotions, evening client talks, and events planned. We are also due to celebrate our two-year anniversary in March.

We are also very excited about our first client evening talk on April 21st. Our Vet, Emily, will be informing clients on basic first aid for your pets. It is £10 per person to attend, and you will receive your very own first aid kit to take home. All proceeds from this event will go to our local dog charity, SHAK (Safe Homes and Kindness), and to MacMillian Support - a charity that is close to our Vet's hearts.

Our promotions and events are always communicated on our Facebook page, so make sure you give us a like to follow the latest updates. We also include our latest promotions and events on our website, so visit www.coquetvets.co.uk to find out the latest activities and news from the team at Coquet Vets.

Whilst there have been many reported cases of vomiting and diarrhoea being caught at beaches, we seem to have been lucky so far, and it is yet to hit us up North! However, this is a timely reminder to always wash your dog's feet after any walk. Vomiting and diarrhoea is a very common presentation that we see every day at the vets. For more information on this and what to look out for, read our latest article in this month's issue.

We hope you enjoy all our latest articles, and don't forget to take advantage of our latest promotions, which includes microchipping for cats for just £8.00 over the month of February 2022.

Stay safe, and we look forward to seeing you at your next visit.

CASE STUDY: TOY POODLE HIP DISLOCATION

As we move into the winter months, it's important to be aware of the dangers of antifreeze to your pets. All animals are susceptible to ethylene glycol (EG) toxicity, but it is most common in dogs and cats. Most intoxication is associated with ingestion of antifreeze, which is commonly used in the winter months. Here are the symptoms to look out for if you suspect your pet has EG toxicity.
